HOW I WOULD TRY TO MAKE ₹1,00,000 IN 7 DAYS

A practical service-business playbook using only a laptop

The strategy: choose one service businesses already need, demonstrate value, contact targeted prospects, and sell a clearly scoped pilot.

A realistic note

₹1 lakh in seven days is an ambitious target, not a guaranteed result. This guide organizes the approach into actions you can control—offer quality, prospect research, outreach, sales conversations, and delivery—rather than promising a particular income.

The Four Service Options

Service	What you sell	Example offer
Content as a Service	Repurpose existing videos, podcasts, and interviews into short-form clips.	Create 20–30 short clips from existing content.
Lead Generation	Research qualified prospects and help businesses start relevant conversations.	Build a targeted prospect list and support outreach.
Ads as a Service	Improve campaign strategy, creatives, targeting, or conversion tracking.	Audit an existing campaign and provide an improvement plan.
AI as a Service	Automate repetitive business tasks and manual workflows.	Automate lead intake, inquiry handling, reporting, or data entry.

Selection rule: Choose one service you can deliver competently, demonstrate quickly, and connect to a measurable business outcome. Do not try to sell all four at once.

1. Choose One High-Demand Service

Start with a problem a business already knows it has. Make the offer specific enough that the buyer understands what they will receive, when they will receive it, and why it may help.

Good offer checklist

- One target customer type and one clear problem.
- A defined deliverable and turnaround time.
- A sample, audit, or demonstration that shows your capability.
- A success measure that is realistic and within your influence.

2. Use Performance-Based Pricing Carefully

A possible structure is a fixed base fee to cover the work plus an incentive tied to an agreed performance measure. For a beginner, a small, clearly scoped paid pilot can be easier to sell than a large open-ended contract.

Put these in writing

- Scope, deliverables, timeline, and what is excluded.
- The exact performance metric and how it will be measured.
- Attribution rules, reporting period, and payment terms.
- Any dependencies on the client, ad spend, data access, or approvals.

The reel mentions $1,000–$1,500 monthly fees plus performance incentives for some clients. Treat that as an example—not a beginner price benchmark or a guaranteed outcome. Never promise results you cannot control.

3. Apply the Dream 100 Method

1. **Choose a market.** Examples include real estate agencies, coaching businesses, clinics, or small e-commerce companies.
2. **Find a specific problem.** Look for slow follow-up, repetitive administration, inconsistent content, or inefficient lead handling.
3. **Build something useful.** Create a sample workflow, short content sample, prospect list, or concise audit.
4. **Personalize your outreach.** Explain what you noticed, show your sample, and state the potential benefit.
5. **Ask for a conversation.** Offer a short call to explore whether the solution fits their needs.

Aim for a researched list of 100–200 companies, not 200 generic messages. Use legitimate contact channels, personalize outreach, and comply with applicable privacy and anti-spam rules.

4. Contact Decision-Makers and Book Calls

A concise message should include:

- A specific observation about the business.
- A useful example of what you could improve.
- A simple request for a short conversation.

Track prospects, contact dates, replies, follow-ups, calls booked, proposals sent, and deals closed. The claim that 10–30 conversations guarantee a client is not reliable; focused conversations help you understand buyer needs and improve the offer.

5. The Seven-Day Execution Plan

Day	Action
Day 1	Select one service, one target market, and one specific business problem.
Day 2	Create a sample or audit that demonstrates your ability to solve the problem.
Day 3	Research 100–200 suitable companies; prioritize those with a clear need and ability to pay.
Days 4–5	Send personalized messages, follow up appropriately, and book discovery calls.
Day 6	Propose a paid pilot with clear scope, deliverables, price, timeline, and success measures.
Day 7	Follow up with qualified prospects, agree on terms, collect payment according to the agreement, and begin delivery.

6. The ₹1,00,000 Revenue Math

These are illustrative combinations of client count and fee—not forecasts.

Clients won	Fee per client	Total revenue
2	₹50,000	₹1,00,000
4	₹25,000	₹1,00,000
5	₹20,000	₹1,00,000
10	₹10,000	₹1,00,000

Revenue is not profit. Deduct delivery costs, software, taxes, payment fees, and other expenses. Winning clients and collecting payment within seven days may be difficult, especially without an existing portfolio, proven results, or a network.

7. Optional: Structured Data for Your Landing Page

Schema markup (JSON-LD code) tells search engines what a page is about. It supports your landing page or service site; it does not replace outreach and will not win clients within seven days. Treat it as a half-day task, after the sample and prospect list are done.

Priority	Schema types	Why
High: add now	Organization, WebSite, WebPage, Service, Offer, ContactPoint	Says who you are, what you sell, at what terms, and how to reach you.
Medium	Person, BreadcrumbList, FAQPage	Founder credibility, site navigation, and answers to common objections.
Client sites only	LocalBusiness, PostalAddress, GeoCoordinates, OpeningHoursSpecification	Useful when you build pages for clinics or agencies with a physical location, not for your own online service.
Later	OfferCatalog, ItemList, BlogPosting	Needs several services or a blog first.
Avoid for now	Review, AggregateRating	Only mark up genuine, visible customer reviews. Invented or self-written ratings break search guidelines and risk penalties.

Validate every page with Google's Rich Results Test and the Schema Markup Validator. Search engines may not show rich results for every type, so check current guidelines before relying on them.

8. Your AI Services and What Each Is For

The free model list can be grouped by job. These models sit on third-party resellers, so treat every model name as unverified and treat output as a draft.

Type	Examples from your list	Use in the lead-gen service
Chat and reasoning	qwen3.8-27b, nemotron-3-super and ultra, gpt-oss-20b, deepseek-v4-flash, glm-5.3, mimo-v2.6-flash	Summarise a company's website, find a likely pain point, score lead fit, draft personalised openers, follow-ups and proposals.
Small and fast	qwen3.5-4b, qwen3-8b, agnes flash models, ling-3.1-flash, lfm-2.5	Bulk tagging, classifying replies, first-pass sorting of large lists.
Embeddings and reranker	bge-m3, bge-large-en and zh, bge-reranker-v2-m3	Match leads to your ideal customer profile, remove duplicates, search leads by meaning, rank the best.
OCR and parsing	deepseek-ocr, paddleocr-vl-1.5, nemotron-parse-2.0	Pull contact details out of PDFs, business cards and screenshots.
Vision	llama-3.2-11b-vision, deepseek-v4-flash-vision	Review website screenshots and flag problems such as a missing booking form.
Translation	hunyuan-mt-7b	Outreach and replies in other languages.
Code	north-mini-code	Small automation scripts and document templates.

What the service can deliver

- A scored, researched lead list with a one-line summary per company.
- Personalised first messages and follow-up sequences, reviewed by you before sending.
- Contact details extracted from documents, plus an audit of a prospect's website.

Safeguards

- Never let a model invent emails, phone numbers or facts; take contacts from real sources.
- Do not send personal or client data through free resellers, which may log everything.
- Cache outputs, and keep a paid fallback for client work, because free endpoints can vanish or throttle.

9. Free Architecture: Desktop App, PWA and Google Sheets

The goal is zero running cost: no paid database and no paid hosting.

Layer	Free option	Role
Desktop app	Electron, or the lighter Tauri or Neutralino, with a local SQLite file	Main store. Runs scraping, AI calls and document generation; holds the API keys.
Phone and web	PWA on Cloudflare Pages at a free `gallavanter.pages.dev` address	Viewer and companion: see leads, get push notifications.
Shared data	The user's own Google Sheets for leads, Google Docs for output	Backup and cross-device data, stored in the user's Drive, so you hold no lead data.
Documents	LaTeX compiled in the app with WebAssembly (BusyTeX or SwiftLaTeX), or Typst	PDFs without installing pdflatex.
Distribution	GitHub Releases for installers	Free hosting of the downloads.
Other interfaces	Telegram bot, GitHub Pages, Netlify	Notifications and alternatives to Cloudflare.

Rules to follow

- `gallavanter.pages.dev` is a free subdomain with HTTPS, not your own domain, and works only if the name is still available.
- Scrape and call AI from the desktop app. A PWA cannot scrape other sites because of browser CORS rules.
- Never put API keys in the PWA, because anyone can read them.
- Sheets is not a real database: write in batches, expect rate limits, and avoid two devices editing at once.
- Use the narrow `drive.file` Google permission. Broader Sheets access needs Google's app verification, and unverified apps show a warning and are capped at 100 test users.
- Electron bundles Chromium, so installers are large; Tauri is lighter if size matters.
- The LaTeX engine bundles are large too: check file sizes before hosting them on Cloudflare Pages, and compile in the desktop app if they exceed its limits.

The Principle to Remember

Sell a specific business outcome. Demonstrate value before asking for a commitment. Reach relevant decision-makers. Make it easy to start with a clearly scoped offer.

A useful target is to execute the process well and learn quickly. Treat ₹1 lakh in seven days as an ambitious goal—not a promise of income.
